

# Quality Policy

For over 30 years we have been manufacturing foil articles used in the packaging, furniture, construction and automotive industries. Company FOLIAREX constantly strives to be considered as a modern and dynamically developing enterprise. We aim to be the “first choice” company. Our goal is to be known on the market for high competence, reliability and flexibility.

*We follow the principle that quality is never a coincidence, but the result of our good intentions and efforts. We all feel responsible for providing solutions within plastic packaging and other products that meet the expectations of our customers.*

## **OUR COMMITMENTS ON QUALITY**

### **1. We provide innovative products that meet our Customers` expectations.**

Awareness of Customer expectations, requirements and opinions is our highest priority. With concern for our customers and their needs we develop, offer and deliver products that fulfill their expectations completely.

We do not accept the receipt, processing and delivery of non-compliant products.

### **2. We support and engage our employees in providing high quality products.**

We focus on creating a work environment in which every employee understands his responsibility in the process of creating quality and environmentally friendly products.

We work out solutions and share them.

### **3. We improve and optimize processes.**

We modernize the machinery park in order to increase production capacity. We are very economical with raw materials, which helps to reduce the amount of post-production waste.

We reduce the consumption of natural resources by using regranulate produced from waste and its further processing into plastic products.

The Management Board of P.W. FOLIAREX Sp. z o.o. declares that the Quality Policy is communicated, understood and applied in the organization and provides the necessary resources to maintain the functioning of the Quality Management System.
